TrueMove H Demonstrates Video Call on 5G Smartphone for the First Time in Thailand

TrueMove H Demonstrates Video Call on 5G Smartphone for the First Time in Thailand

• TrueMove H Organizes a test of satellite signal interference caused by deployment of 5G technology on 3.5-GHz spectrum at 5G testing site in Thanyaburi, Pathumthani.

TrueMove H, the 4G Network of the Year in Asia Pacific, re-emphasizes its leadership in advanced telecommunication technology with an endless mission to develop its network coverage. Mr. Jirachai Kunakorn (left), True Group's Chief Network Operations Officer, and Mr. Khanungdej Triratupathum (right), Director, Network Engineering & Quality Assurance, jointly demonstrated 5G Video Call using a 5G smartphone Huawei Mate 20X* for the first time in Thailand, which turned out ultimately successful both in terms of voice and video signal quality of HD – 4K level. It was also the first time that a test of satellite signal interference possibly caused by deployment of 5G technology on 3.5-GHz frequency was carried out as per permission by the National Broadcasting and Telecommunication Commission at the 5G Testing Site in Thanayburi District of Pathumthani.

* will soon available in Thailand
